Executive summary book for engineering colleges communications professional basic course materials. the book first explain the transmission theory. policy-wave transmission lines. microwave network infrastructure. as the theoretical basis of the book. Second explained the basic passive components. such as microwave resonators. splitters. couplers. filters. and microwave ferrite devices finest principles and engineering design. Active microwave circuit design. and the main microwave systems and applications. the book is also a concise description. Some new developments in microwave technology in recent years. such as dielectric resonators and speak up. YIG wideband tuner. computer-aided design of microwave circuits and microwave technology vector network analyzer. microwave uncl spectrometer in the book roar a brief description. Each chapter in the book has some examples and exercises to facilitate the reader to deepen the understanding and practice. \ T \ t \ t \ t directory transmission line theory and impedance matching 1.1 transmission line lumped parameter equivalent circuit and field analysis method 1.2 Termination of different load lossless transmission line 1.3 impedance and admittance circle diagram (SMITH) 1.4 4 1.7 1.8 the transmission line of a lossless transmission line for impedance matching and tuning of the impedance converter. the signal source and load impedance matching 1.5 1.6 reflex theory and broadband impedance transformer transient process in the third chapter of the exercises of the second microwave transmission lines summary...
